

# AGRI KELPMAX

*1.3%N, 0.5%P, 1.1%K Liquid Seaweed Concentrate with added Amino Acids*

Concentrated product with highly active plant hormones and amino acids to promote root growth, pollination, fruit quality and stress mitigation

## BENEFITS OF AGRI KELPMAX

- Kelp product with plant hormones and added amino acid complexes that promotes larger and more vigorous root systems, pollination, fruit size, fruit quality and stress mitigation.
- Improved root growth facilitates uptake of calcium and phosphorus.
- Natural plant hormones help crops recover from stress situations such as moisture, heat, cold and toxicities.
- Encourages strong cell development in foliage and fruit.
- Slows senescence in many crops.
- Improved general plant health enhances plant resistance to nematodes and other pest and fungal diseases.
- Completely plant available pH makes it chemically compatible with a wide range of agricultural chemicals.
- Does not cause alkaline hydrolysis.

## INCLUDES KELPAK, THE WORLD'S LEADING SEAWEED EXTRACT?

In comparison to other seaweed products, Kelpak® contains the highest levels of natural growth hormones auxins and cytokinins (11.0 mg/L of auxin and 0.031 mg/L of cytokinin). The naturally high levels are preserved by the patented cold cell burst production process which is unique to Kelpak®. This ensures the hormones and auxins are not denatured as happens with heat or hydroxide extraction processes.

## THE ROLE OF AUXINS AND PLANT HORMONES

The auxins and other plant hormones present in Kelpmax® are responsible for adventitious root initiation and overall plant cell enlargement. These plant hormones also assist in improving pollination, fruit quality and mitigating stresses caused by environment, toxicities and moisture.

## THE IMPORTANCE OF AMINO ACIDS

Amino acids are the molecular building blocks of proteins. Proteins are found in all cells and carry out a variety of important cellular functions. Proteins are also important structural components of the cell wall. Plants can directly utilise added amino acids without having to create them which means that plants have much more available energy to use for other functions.

# AGRI KELPMAX

**CHARACTERISTICS:** pH: 4.0 - 5.0; Specific Gravity: 1.09 – 1.11

**AUS Analysis W/V%:** 1.3% N, 0.5% P, 1.1% K.

---

## APPLICATION

**BROADACRE:** Such as Barley, Canola, Cotton, Grain legumes, Maize, Oats, Rice, Sorghum, Triticale, Wheat & Pasture crops. **Foliar: 5 - 7 L/ha** in a maximum of 600L final spray volume. Spray at 4 to 5-leaf stage. In Pasture, Spray during early growth after emergence. Repeat 7 to 14 days after cutting or grazing.

**DECIDUOUS TREE CROPS:** Such as Almond, Apple, Cherry, Nectarine, Peach, Pear, Pistachio & Walnut. **Foliar: 5 - 10 L/ha** in a maximum of 1000L final spray volume. Dip Rate: New Planting: 1:100 dilution. Dip bare roots for 5 minutes before transplant, or Soak seedling bag before transplant, or Soak soil around trees after plant-out. Spray at 30% bloom and repeat twice at 10 – 12 day intervals. Spray at fruit set (10 mm fruit diameter). Repeat twice at 14 day intervals.

**EVERGREEN TREE CROPS:** Such as Avocado, Citrus, Macadamia & Lychee. **Foliar: 5 - 10 L/ha** in a maximum of 1000L final spray volume. Dip Rate: New Planting: 1:200-300 dilution. Spray avocado trees at the beginning of spring growth and repeat at 50% flowering. Spray macadamia trees at start of bloom and repeat 4 times at monthly intervals. Spray at fruit set (10 mm fruit diameter). Repeat twice at 14 day intervals. If water volume exceeds 1000 L/ha, increase Kelpmax rate to retain 1:300 dilution. Dip bare roots for 5 minutes before transplant, or Soak seedling bag before transplant, or Soak soil around trees after plant-out.

**BANANA:** **Foliar: 5 - 10 L/ha** in a maximum of 1000L final spray volume. Dip Rate: 1:100. Apply to base of the sucker and repeat after 6 months. Spray pre-flower and repeat 3 times at monthly intervals.

**FRUITING VEGETABLES:** Such as Capsicum, Cucurbits, Eggplant, Pumpkin, Tomato, & Watermelon. **Foliar: 5 - 10 L/ha** in a maximum of 1000L final spray volume. **Dip Rate: 1:100 dilution.** Dip tray with seedlings in solution, or Wet seedling tray with watering can before transplant. Spray 14 days after transplant. Repeat once or twice at 14 day intervals. Direct seeded plants receive first foliar application at the 4-leaf stage.

**LEAFY VEGETABLES:** Such as Broccoli, Cabbage, Cauliflower, Endive, Fennel, Herbs, Kale & Lettuce. **Foliar: 5 - 10 L/ha** in a maximum of 800L final spray volume. **Dip Rate: 1:100 dilution.** Dip tray with seedlings in solution, or Wet seedling tray with watering can before transplant, or for direct seeding, Spray at 3 to 5-leaf stage. Repeat once or twice at 14 to 21 day intervals.

**ROOT VEGETABLES:** Such as Beetroot, Carrot, Leek, Onion, Potato, Radish & Sweet Potato. **Foliar: 5 - 10 L/ha** in a maximum of 800L final spray volume. **Dip Rate: 1:300 dilution.** Dip seed potatoes before planting for approximately 5 minutes, or Spray in furrow before covering, then spray after emergence at 15 cm crown diameter (14 to 28 days DAE). For other crops: Spray 14 to 21 days after transplant, or spray at 3 to 4-leaf stage for direct seeded plants. Repeat foliar application twice at 14 to 21 day intervals. Do not apply to onions or garlic after bulb swelling.

**VINE and BERRY CROPS:** Such as Blueberry, Raspberry, Strawberry, Table & Wine Grapes. **Foliar: 5 - 10 L/ha** in a maximum of 1000L final spray volume. **Dip Rate: 1:100 dilution.** Spray after full bloom. Repeat 2 to 3 times at 10 to 12 day intervals (increase Kelpmax rate to maintain 1:300 dilution when high water volumes are used). Apply 2 to 3 times as bunch Dips, or directed bunch Sprays at 4 to 14 mm berry size.

The information contained in this Product Information Sheet in respect of the "Product" is indicative only and should not be relied upon as advice or a recommendation. While this Information Sheet has been prepared in good faith, Agrichem does not warrant the accuracy of this information. You use the information at your own risk and should rely on your own independent inquiries and assessments. With the exception of the consumer guarantees provided by the Australian Consumer Law (ACL), all conditions and warranties implied in respect of any information or advice provided by Agrichem about the Product are excluded, and Agrichem does not accept any liability whatsoever (including through misrepresentation or negligence), incurred in connection with your use or reliance upon this Information Sheet. If liability under the ACL cannot be excluded but the Product the subject of the Information Sheet is NOT used for personal, domestic or household use or consumption, Agrichem may (at its election) limit its liability to replacement of the Product, or payment of the cost of acquiring the Product. You must not reproduce this information sheet without written consent from Agrichem®.

NOTE: The suggested rates of application of the Product are designed for typical Australian conditions and should be used as a guide only. Each farmer's climatic conditions, water quality, soil types, application processes and practices may differ and therefore necessitate corrections to ensure optimum results. Good agricultural practice requires that application be avoided under extreme weather conditions such as temperatures over 28°C, high humidity, frost, rain etc. It is recommended that when applying to a crop or area for the first time, or in combination with other chemicals, a small test area should be sprayed and observed prior to the total spray. Where possible, it is recommended that regular leaf tests are conducted to determine actual plant nutrient availability during each growth cycle. Soil tests at least once per year are essential.
